

Case History

MONDI Paper, Ruzomberok/Slovakia

OTT GROUP

Mondi SCP in Ruzomberok is one of Mondi's largest plants and is the biggest integrated mill producing paper and pulp in the Slovak Republic, with a production capacity of 560,000 tonnes of uncoated fine paper, 66,000 tonnes of packaging paper and 100,000 tonnes of market pulp.

The mill is 100% energy self-sufficient with over 94% of its energy coming from renewable resources. The wood comes from certified, well-managed forests under FSC™ as well PEFC™ schemes. The increased volumes of production thus go hand in hand with continuously decreasing our footprint on the environment.

In 2017 OTT has been awarded to upgrade and retrofit the existing panel strip aeration system starting with 2 of the 4 existing aeration lines. Guaranteed values for oxygen transfer and efficiency are exceeded as proven in transfer testing by an independent institute.

Installation of the prefabricated **AirRex®** laterals and the 3.300 pcs of **MAGNUM® 2000 FLEXSIL®** tube diffusers was effortless and fast.
